

Concerned About Your Household Water?

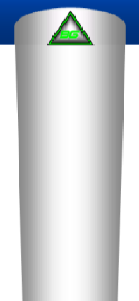

Hanish Water™

Hanish Water
BioGuard

Come inside and experience the difference of the

BioGuard

For years reverse osmosis, and other Point Of Use drinking water systems have been the only means of reliably treating drinking water in homes. These are expensive, wasteful, and out dated technologies that require monthly maintenance and care.

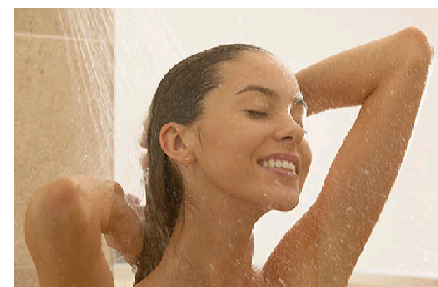

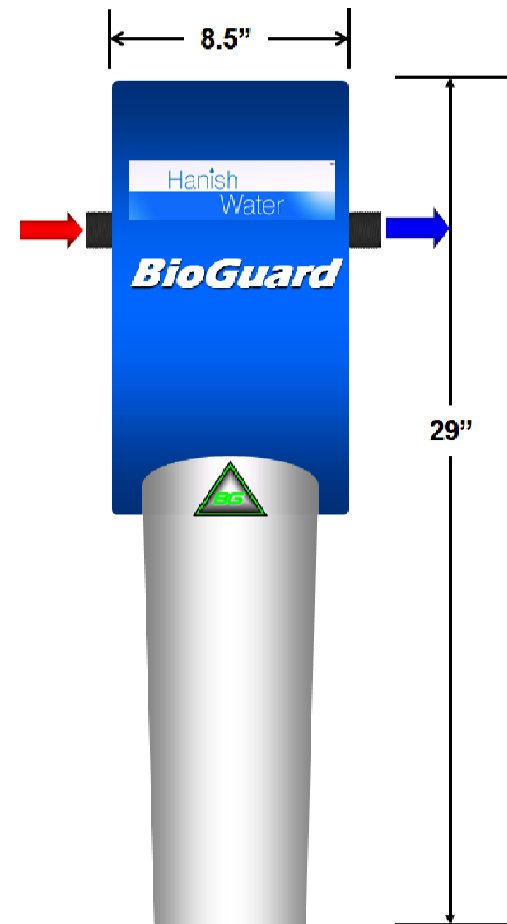

Recent scientific developments have made it possible for the average homeowner to now treat the water at every tap in their home inexpensively, efficiently and with no monthly maintenance. These developments have all come together to form the **BIOGUARD** whole house water filtering cartridge.

Unlike any other water filtering cartridges on the market today, the **BIOGUARD** treats your water for Virus, Bacteria, Cysts and Turbidity with **NO** Electricity, **NO** Drain line, **NO** Wasted water, and **NO** Moving parts.

All you get is **SAFE**, clean, clear great tasting drinking water at every tap in your home.

Whole House Water Treatment

Protecting Your Family At Every Tap In Your Home.
