

Concerned About Your Household Water?

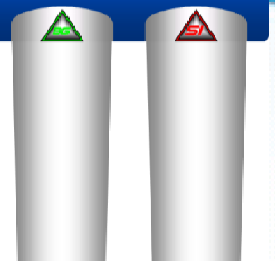

Hanish Water™

Hanish Water

WaterCrest-2

Come Inside And Experience The Difference

WATERCREST-10

For years water softeners, backwashing carbon filters, and reverse osmosis drinking water systems have been the only means of affordable whole house water treatment.

These are expensive, wasteful, and out dated technologies that require monthly maintenance and care.

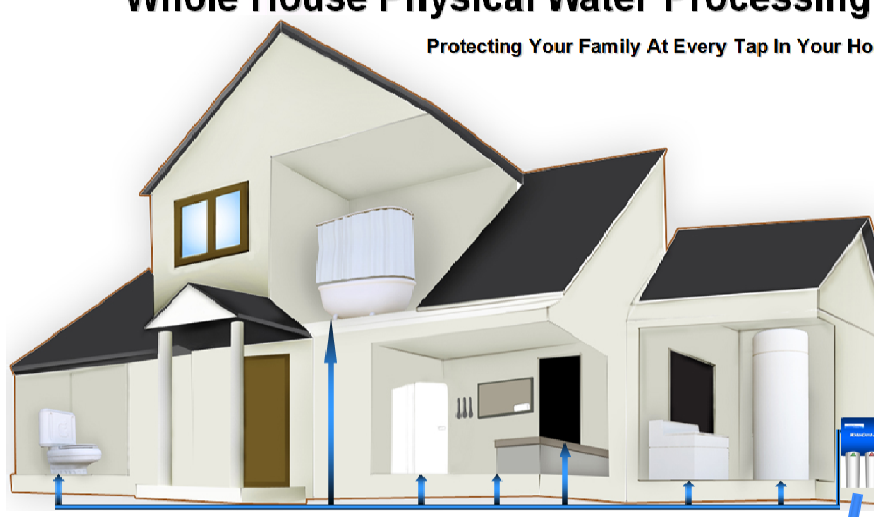

Recent scientific developments have made it possible for the average homeowner to now treat the water at every tap in their home inexpensively, efficiently and with no monthly maintenance.

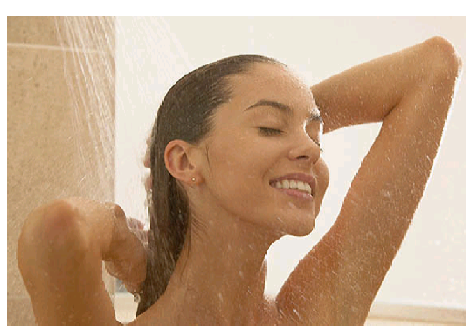

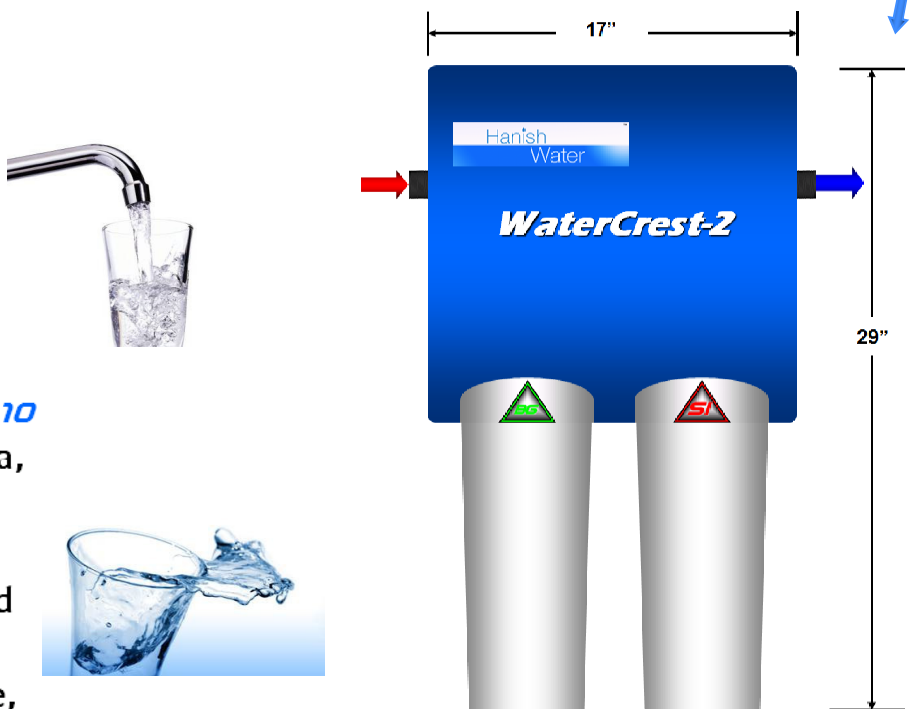

These technologies have all come together to form the **WaterCrest-10** whole house water processing system by Hanish Water™.

Unlike any other water treatment system on the market today, the **WaterCrest-10** treats the water in your home for bacteria, virus, cysts, tastes, odors, chlorine, hardness and other contaminants using **NO** electricity, **NO** drain line, **NO** wasted water, **NO** moving parts, and **NO** salt. All you get is safe, clean, clear, scale free, great tasting drinking water at every tap in your home that still contains all of the healthy minerals that our bodies need on a daily basis.

The **WaterCrest-10** is tomorrow's **GREEN** technology available to you Today!
